

## Netwatch **core**

From one device, any time of the day or night, the interactive Core app gives you full control over your Netwatch system.

### Flexible Zoning

You can group cameras into named zones. This allows for the different zones to be armed independently, while other zones permit access.

### Remote Arming and Disarming

Traditional security systems require a keyholder to be on site to arm or disarm the system, this has risks in terms of requiring a staff member to walk into an area of potential danger. CORE allows the keyholder to safely arm and disarm a site remotely using their mobile.

### Visitor Pass

Manage visitor access remotely from your smartphone and ensure maximum security in the process. Instantly set up a visitor with a unique single use CORE password to apply a temporary mask to a camera or zone.

### Scheduling Arming & Disarming

Never forget to arm your site again. CORE allows you to set up a schedule of arming and disarming times with recurring times being stored, along with exceptions such as holidays. Arming schedules are easily visible on your dashboard and can be amended anytime, anywhere.

### Alarm Response (Protocol)

Assign certain alarm types to certain people. This will ensure you receive the level of response that you want. Changes are effective immediately.

### Managing Complex Corporate Sites

Managing your security settings across multiple sites is a simplified process using Netwatch CORE. You can assign and control employee permission levels across multiple sites. This is also the option to get alerts when users make changes to protocol details.

### Interactive Site Map

No longer do you need to recall where each camera is located. Our interactive map appears on the homepage of Netwatch CORE allowing you to easily follow the camera sequence around the site.

### Visibility & Control over Video Alarm System

Netwatch CORE delivers regular updates to keep you informed about the activity on your site. This gives you confidence knowing everything is working as it should.

## Accessibility

ACTIVITY	WEBSITE	APP
